

Fibigeriana I.

The Vartian Collection

Part I. Noctuoidea

The newly established book series, the Fibigeriana, is devoted to publish the fundamental achievements of the so-called traditional lepidopterology, as well as syntheses emphasizing the concreteness of analytical data and plain analytical papers providing interlocking materials for future syntheses what we hope to activate. One of the major aims and important missions of the Heterocera Press is to publish the taxonomically revised historical Lepidoptera collections preserved in museums. These unique and significant collections serve as reference material of various zoogeographical regions, and substantiation of the former diversity of habitats might be transformed or even disappeared since then.

The first item of the Fibigeriana is the catalogue of the Noctuoidea material of the Vartian collection, containing the families Notodontidae, Nolidae, Erebidae (which includes as subfamilies, besides the "traditional" Catocalinae and Ophiderinae, all Lymantriinae and Arctiinae) and the sensu stricto Noctuidae, the trifine noctuids. This is the first ever published such issue, an encyclopaedia and identification guide of the western and Central Asiatic fauna with special reference to Iran and Afghanistan.

The first section of the book is bilingual, introducing Eva Vartian and her lepidopterological activity in English and German. The scientific part comprises the annotated list of the type-material, the revised checklist of the Noctuoidea collection - mean altogether **3009 species-level taxa** belonging to **673 genera**-, the life-size colour images of all distinguished taxa of the superfamily on **152 colour plates** and a number of black and white and colour images illustrating the curriculum, the expeditions and the descriptions of **10 new species** and a new subspecies.

The book is warmly recommended to all professional and non-professional lepidopterists who are devoted to maintain and develop collections and are intended to study the extreme diversity of the Near and Middle East.

The first volume of the Vartian Collection catalogue can serve as a handbook for the taxonomic and faunistical studies of western and Central Asia.
